

**Bachelor of Science in “Logopedics“**  
**Master of Science in “Teaching and Research Logopedics”**

The **RWTH Aachen University**, one of the excellence universities of Germany, comprises over 100 different academic programmes and approximately 31,000 students. The two logopedic study programmes are clinically embedded in a close cooperation with the Neurological Clinic and the Clinic of Phoniatics, Pedaudiology and Communication Disorders.

The main focus of the **Bachelor Programme “Logopedics“** (3 years, 180 ETCS) is the application of evidence based practice. The Bachelor Programme consists of three main elements. The *basal skills* comprise introductory courses concerning therapeutic and scientific methodology. The *expert skills* are made up of practical experience, knowledge in all relevant disorders and knowledge about the application of evidence-based practice. The *interdisciplinary skills* consist of the domains of medicine, linguistics, phonetics, psychology and educational science.

The **Master’s Programme „Teaching & Research Logopedics“** (2 years, 120 ETCS) is designed to train students for independent research activities as well as for teaching. Students will gain the ability to critically reflect the current state of research and to conduct their own treatment-related experiments. They also learn to apply theoretical knowledge about didactic concepts to their own teaching units. The Master’s thesis is based on an independent research project conducted during the second year.

The academic prerequisite to enter the SLT programme is a higher education entrance qualification allowing access to university studies and a SLT diploma on pre-university-level. The yearly intake is 20 students for Bachelor degree and 20 for Master degree.
